About JBI

JBI is an international research organization based in the Faculty of Health and Medical Sciences at the University of Adelaide, South Australia. JBI develops and delivers unique evidence-based information, software, education and training designed to improve healthcare practice and health outcomes.

JBI works closely with universities and hospitals from across the globe through the JBI Collaboration.

JBI and the JBI Collaboration are driven by a united desire to contribute to the improvement of health outcomes globally and to support and recognize organizations and individuals driven to practice and promote healthcare informed by the highest quality and most up to date evidence. JBI Model of Evidence-based Healthcare

The JBI approach to evidence-based healthcare is unique.

JBI and its Collaborating Entities promote and support the synthesis, transfer and implementation of evidence through identifying feasible, appropriate, meaningful and effective healthcare practices to assist in the improvement of health care outcomes globally.

Global healthcare evidence needs, as identified by health professionals or patients/consumers, are addressed through the generation of research evidence that is effective, but also appropriate, feasible and meaningful to specific populations, cultures and settings.

This evidence is collated and the results are appraised, synthesized and transferred to service delivery settings and health professionals who utilize it and evaluate its impact on health outcomes, health systems and professional practice.
